

VB agent 2.1.111201

Release Notes

Introduction

These release notes cover what's new, download and installation instruction for VB agent 2.1.111201.

If you need additional support or have any questions to ask on this version, you can contact us using the support@commonit.com email address.

What's new in VB agent 2.1.111201

Since version 2.1.110601, the following modifications have been made:

- **Kerberos:** When relaying Kerberos authentication between agent and remote browser, some network communications could have been corrupted. This has been fixed.
- **Exchange Zone:** After 24 hours, the authorization cookie to access the Exchange Zone is not valid anymore and can result in 404 errors. Authorization cookie is now renewed before it is the case.
- **Printing:** On Windows platform, it was not possible to correctly print a document using landscape orientation. This has been fixed.
- **Agent:** If the user wants to exit the application with sessions opened, a dedicated dialog is displayed to warn him that the sessions will be closed.
- **Sound:** On Windows platform, it was not possible to enable sound. This has been fixed.

Downloading and installing VB agent 2.1.111201

Depending on the platform, the VB agent 2.1.111201 can be downloaded using the sections and links below:
